About Us

Sunsab is where innovation fuels passion! We're a dynamic team of software developers armed with cutting-edge expertise in modern technologies. Our mission? To harness technology's power for positive global change.

At Sunsab, we believe in the transformative potential of software. Whether crafting sleek mobile apps or architecting robust web solutions, we're committed to shaping the future through code.

Greenhouse Monitoring & Control System

The Greenhouse Monitoring & Control System (GMCS) is an application designed to elevate agricultural productivity by monitoring greenhouse metrics and managing mechanical elements like windows and humidity control system.

Its interface provides access to crucial greenhouse data and upcoming weather alerts. This system can automatically adapt to maximize plant growth, while also permitting manual adjustments to its components when necessary.

Two Sisters Gallery

The Two Sisters Gallery system is a host for the gallery's artwork as well as a registration system for art classes that allows students to track their upcoming classes and the client to manage students.

The screenshot shows the homepage of the Two Sisters Gallery website. At the top, there is a navigation bar with links for "Gallery", "Lessons", "Tutorials", "Account", and "Cart". On the far right of the navigation bar is a user icon with a dropdown arrow. Below the navigation bar, the main title "Our Artwork" is displayed in large white text against a background of a painting. To the left of the title is a "Filters" dropdown menu. Below the title, there are four thumbnail images of paintings: "A Dance in His Arms", "Rock in Time", "Before The Ball", and "Emerald Lake". Each thumbnail has a caption underneath it.

Custom Weapon Warehouse

Custom Weapon Warehouse showcases customized items designed for a popular online video game. It offers a filterable, paginated list of items accompanied by video demonstrations. Additionally, users can explore a page dedicated to user-submitted item ideas, where they can create, submit, and vote on concepts.

The platform continuously expands its content and features to provide an enriched experience for its users.

QuickPortfolio

QuickPortfolio is a platform designed for early-career computing professionals to effortlessly create portfolios that highlight their projects, problem-solving approaches, and work artifacts for potential employers.

It is a full-stack web application that has list pagination, data serialization/marshalling to AWS using their DynamoDB data solution, and features a responsive modern UI, resulting in beautifully crafted and elegant portfolios made in record time.

The screenshot shows a user profile for "Andrey Test Portfolio". At the top, there's a navigation bar with links for "ABOUT", "WORK HISTORY", "PROJECTS", "SKILLS", and "CONTACT". Below the navigation is a cartoon illustration of a boy with brown hair and glasses. The profile section is titled "Andrey Test Portfolio" and includes a bio: "I am a dedicated and ambitious Informatics student at the University of Washington. I am a skilled front-end web developer. Beyond code, I value understanding user needs and strive to create compelling and useful user experiences. I also love to teach and work with people!"

Work History

Android and React Native Developer
Samaritan, Throughout 2016 - 2018

- Developed the two Samaritan Android apps (user-facing and partner-facing) from initial MVPs to refined products in 13 months across three periods of contract work. Coordinated across the organization to translate business needs into specifications appropriate for iOS, Android, and backend developers. Worked with bluetooth beacons, payment processors, and other technologies.

Front-End Web Developer
Soro, Aug 2017 - Oct 2017

- Accelerated Soro's progress to launching their MVP by implementing dashboards displaying complex customer and inventory data using the Vue framework. Developed views to display data within business analytics software including implementing reusable components for bar, line, and pie charts. Implemented code to insert and retrieve data from a GraphQL database. Developed forms with user-friendly validation messages.

Mission Statement

QuickPortfolio is a platform for early-career computing professionals to easily create a portfolio that showcases their projects, their problem-solving process, and artifacts of work to potential employers.

TEDxUofW 2019

I worked with a team of developers to create the TEDxUofW 2019 conference site. I implemented many of our flashy front-end views for the TEDxUofW 2019 website including our splash animation, our speakers listing, and our team page. I also integrated Google Firebase to create a live question/answer feature for our audience.

AI for the Ocean

The webpage is dedicated to showcasing the OceanAI project, which focuses on exploring the application of AI tools in studying the oceans and their diverse ecosystems.

The image is a screenshot of a website for 'AI FOR THE OCEAN'. At the top left is the text 'AI FOR THE OCEAN'. At the top right are links for 'MISSION', 'PEOPLE', 'VOICES', and 'APPLY AI'. The main visual is a dark blue rectangular area containing a large, semi-transparent circular logo with the word 'ATOMS' in white. The logo has a stylized wave graphic behind it. Below the logo is the text 'ARTIFICIAL INTELLIGENCE TOOLKIT FOR OPEN MARINE SCIENCE' in white. Underneath that is a section titled 'MISSION STATEMENT' with a paragraph about the toolkit's mission. Further down is a section titled 'HOW TO USE' with a paragraph about the toolkit's coverage and intended users. The entire central area is framed by a thin white border. The background of the page features a stylized illustration of an underwater environment with sharks and coral reefs.

HOW ARE ANNOTATIONS USED IN MACHINE LEARNING?

In order to train a machine learning model on images, the image dataset needs to be labeled with annotations. Annotations are labels that help the user identify objects of interest in an image.

AUTOMATIC:

Done by training an initial model on a dataset, having the technology detect semantic keywords automatically, and then using human effort to correct its output and then retrain the model.

SEMI-AUTOMATIC:

The user annotates the image then subjects it to feature extraction and clustering algorithms. This method is done with the use of an annotation tool like makesese.ai or Viame. Semi-Automatic annotations are more efficient than manual annotation, more accurate than automatic, useful for
